

## **SOLAR COLLECTOR QUESTIONS:**

**SO1: (Q84:) What needs to be done for testing solar collectors?**

A: First, three (3) specimens are required. Second, you only need to test the structural load pressure sequence in Protocol PA202. Attach the specimens as would be in the field and apply the corresponding pressures. PA201 and PA203 are not required.

**SO2: (Q85:) Reserved.**
